Compounding with 10x AI

STAKE LOW · COMPOUND EVERYTHING

The quiet method for growing a trading account

· BY 10X AI ·

Why compounding beats big bets

Most traders lose the same way: they risk too much on a single trade, lose it, then chase the loss with a bigger one.

Compounding is the opposite. You risk a small, fixed slice. When it wins, the profit stays in the account and the next trade is built on a slightly larger base. Over time the base grows — not because of one heroic trade, but because the account keeps its winnings.

"The market does not reward the boldest bet. It rewards the account that stays in the game long enough to compound."

The goal is not to get rich in a day. The goal is to make the account **impossible to ignore** in eight weeks.

The method: four steps

STEP 1 — SECURE CAPITAL

Fund the account with money you can afford to keep untouched. It is not spending money. It is working capital.

STEP 2 — TRADE ONLY THE PROFIT

Your capital stays protected. Only the profit generated by the engine is used to take the next trade. The base never shrinks.

STEP 3 — FIXED DURATION

Commit to the cycle — a set number of weeks. No early exits, no panic withdrawals, no skipping days. The engine runs the same schedule every day.

STEP 4 — NO WITHDRAWALS

Withdrawals break the compound. The full balance stays in play until the cycle ends. Then the growth is yours.

Discipline is the entire strategy. The engine handles the analysis — you handle the patience.

Choose your room

Every room follows the same four steps. The difference is the starting capital and the ceiling it can reach.

ROOM 1 \$500 Entry capital Compound target: \$1,500 in 8 weeks	ROOM 2 \$1,000 Entry capital Compound target: \$3,000 in 8 weeks	ROOM 3 \$2,500+ Entry capital Compound target: \$7,500+ in 8 weeks
--	--	--

Room 1 is where most people start. Room 3 is for traders who already know the discipline works.

Room figures are illustrative compounding targets, not guarantees. Final room structure is published by 10x AI before each intake.

How 10x AI runs the cycle

❖ Private Trader

Your guided daily setup. The engine reads the market, recommends the asset and timeframe, and you take the trade. Built for the compounding cycle — small, consistent, repeatable.

✦ Autopilot

Fully automated. Set your assets and rules, and the engine trades while you live your life. The compounding cycle continues even when you are away.

· Signals

Daily direction alerts for traders who prefer to pull the trigger themselves — always available, always included.

All three run on the same engine. The compounding method just tells you what to do with the results: **keep them in play.**

The math, honestly

Take Room 1: \$500 starting capital. A disciplined compounding cycle that returns roughly 15–20% growth per week on the active balance reaches **\$1,500 in eight weeks** — a 3x account, built week by week.

Not every week is a green week. Some weeks the engine defends the balance more than it grows it. That is part of the method: **protect the base, keep the winnings, let time do the heavy lifting.**

"It is not about how fast the account grows in one week. It is about how many weeks the account survives and compounds."

Nothing is guaranteed. Trading carries risk, and no system is perfect. The compounding method reduces the damage of a bad day — it cannot eliminate it. Only trade with capital you can afford to keep committed.

The rules that make it work

- **One plan.** Pick a room and finish the cycle. Switching rooms mid-cycle breaks the math.
- **Profit-only trades.** Never reach into the base. The base is the engine; the profit is the fuel.
- **No withdrawals.** The compound is the whole point. Withdrawals are for the end of the cycle.
- **Same schedule.** The engine runs daily. Consistency compounds faster than size.
- **No chasing.** A lost trade is one trade. Doubling to recover is how accounts die.

Follow the five rules and the four steps, and the only variable left is time.

Start your cycle

1. Create your trading account — iqbroker.com/lp/regframe-01-light-nosocials/?aff=749367
2. Fund your chosen room.
3. Connect your account to 10x AI — takes two minutes: t.me/Shiloh10xbot
4. Pick your room and commit to the eight weeks.

THE CYCLE IS THE STRATEGY

Stake low. Compound everything. Let the engine trade and the method build.
